(4TH EDITION)

3D-VIDEO-ASSISTED EXTRAPERITONEAL LAPAROSCOPIC PROSTATECTOMY

COORDINATED BY: Estêvão Lima, Riccardo Autorino, Jorge Correia-Pinto

Radical prostatectomy is the gold standard treatment for localized prostate cancer, but laparoscopic radical prostatectomy is a highly complex procedure, with an obvious learning curve.

The purpose of this course is therefore to provide advanced training in Laparoscopic Extraperitoneal Prostatectomy in order to give the surgeon intraoperative practice with this type of procedure and to enable the application of acquired knowledge in their clinical routine.

TARGET GROUP:
Urologists
